

# EV3 MICROPYTHON

## LESSON 3

By **STEMPowering Girls**  
[stempoweringgirls.org](http://stempoweringgirls.org)

# REVIEW!

Last week, we learned about if statements and while loops, motor sensors, touch sensors, and brick buttons.

# ULTRASONIC SENSOR

STEMPOWERING GIRLS

[HTTPS://STEMPOWERINGGIRLS.ORG](https://STEMPOWERINGGIRLS.ORG)

# ULTRASONIC SENSOR

The ultrasonic sensor is used to detect the distance between the sensor and an object. It produces ultrasonic sound waves and waits for them to bounce back to it.

STEMPOWERING GIRLS

[HTTPS://STEMPOWERINGGIRLS.ORG](https://STEMPOWERINGGIRLS.ORG)

# DISTANCE FUNCTION

The distance function measures the distance between an object and a sensor and returns it. One of its parameter, silent, tells the sensor whether or not to stop produce sound after measurement. That reduces interference from other sensors but the sensor takes time to turn off. By default, silent is set to FALSE.

```
print(ultrasonic.distance())
```

STEMPOWERING GIRLS

[HTTPS://STEMPOWERINGGIRLS.ORG](https://STEMPOWERINGGIRLS.ORG)

# PRESENCE FUNCTION

The `presence()` function can detect if there are any other ultrasonic sensors. It scans for other ultrasonic sounds. However, if the other sensor is in silent mode, it can only be detected when it is taking a measurement.

```
print(ultrasonic.presence())
```

STEMPOWERING GIRLS

[HTTPS://STEMPOWERINGGIRLS.ORG](https://STEMPOWERINGGIRLS.ORG)

# NOW TRY IT YOURSELF!

CREATE A PROGRAMING USING THE ULTRASONIC SENSOR TO DETECT A WALL AND STOP THE ROBOT BEFORE IT HITS IT.

STEMPOWERING GIRLS

[HTTPS://STEMPOWERINGGIRLS.ORG](https://STEMPOWERINGGIRLS.ORG)

# COLOR SENSOR

STEMPOWERING GIRLS

[HTTPS://STEMPOWERINGGIRLS.ORG](https://STEMPOWERINGGIRLS.ORG)

# COLOR SENSOR

The Color sensor can be used to detect the color of objects, the light levels in a certain area and the amount of light certain objects reflect.

STEMPOWERING GIRLS

[HTTPS://STEMPOWERINGGIRLS.ORG](https://stempoweringgirls.org)

RGB

STEMPOWERING GIRLS

[HTTPS://STEMPOWERINGGIRLS.ORG](https://STEMPOWERINGGIRLS.ORG)

# RGB

Using red, blue, and green light the color sensor measures the reflection from each of them. It returns a set of 3 percentages ranging from 0(no reflection) to 100(high reflection). The `rgb()` function is not used very often.

```
print(colorsensor.rgb())
```

STEMPOWERING GIRLS

[HTTPS://STEMPOWERINGGIRLS.ORG](https://STEMPOWERINGGIRLS.ORG)

# AMBIENT LIGHT INTENSITY

STEMPOWERING GIRLS

[HTTPS://STEMPOWERINGGIRLS.ORG](https://stempoweringgirls.org)

# AMBIENT LIGHT INTENSITY (ALI)

Using the function `ambient()` and a color sensor, the robot can detect the light levels in its surroundings. This is not commonly used in EV3 but it can be used to follow a light source. The function will return a value between 0(dark) and 100(light).

```
print(color.ambient())
```

STEMPOWERING GIRLS

[HTTPS://STEMPOWERINGGIRLS.ORG](https://stempoweringgirls.org)

# NOW TRY IT YOURSELF!

CREATE A PROGRAM THAT HAS THE ROBOT TRAVEL AROUND IN A CIRCLE UNTIL IT DETECTS AN ALI OF ABOVE 50 AND THEN TRAVEL TOWARDS THAT SOURCE FOR 1 ROTATION

STEMPOWERING GIRLS

[HTTPS://STEMPOWERINGGIRLS.ORG](https://STEMPOWERINGGIRLS.ORG)

# REFLECTED LIGHT INTENSITY

STEMPOWERING GIRLS

[HTTPS://STEMPOWERINGGIRLS.ORG](https://STEMPOWERINGGIRLS.ORG)

# REFLECTED LIGHT INTENSITY (RLI)

Using a color sensor and the `reflection()` function, the robot can detect the amount of light a surface reflects. Since darker surfaces absorb more light, they will have a lower RLI than lighter ones. The `reflection()` function returns a value between 0 (very dark) and 100 (very light).

```
print(color.reflection())
```

STEMPOWERING GIRLS

[HTTPS://STEMPOWERINGGIRLS.ORG](https://STEMPOWERINGGIRLS.ORG)

# NOW TRY IT YOURSELF!

CREATE A PROGRAM THAT DETECTS THE RLI OF DIFFERENT SURFACES AND TRY IT OUT!

STEMPOWERING GIRLS

[HTTPS://STEMPOWERINGGIRLS.ORG](https://STEMPOWERINGGIRLS.ORG)

COLOR

STEMPOWERING GIRLS

[HTTPS://STEMPOWERINGGIRLS.ORG](https://STEMPOWERINGGIRLS.ORG)

# COLOR

A color sensor can also detect color (never would have guessed). The `color()` function is what you need. It can detect Black, White, Red, Yellow, Blue, Green, Brown or no color. EV3 color sensors are known to mistake yellow and brown quite often.

```
print(Color.color())
```

STEMPOWERING GIRLS

[HTTPS://STEMPOWERINGGIRLS.ORG](https://stempoweringgirls.org)

# NOW TRY IT YOURSELF!

CREATE A PROGRAM THAT PRODUCES A DIFFERENT SOUND FOR EACH COLOR IT DETECTS.  
(HINT: BRICK.SOUND.BEEP(WHATEVER SOUND FREQUENCY))

STEMPOWERING GIRLS
